Business Continuity Policy

Akfen Construction disciplines itself to ensure business continuity by taking national and international standards, practices and legal regulations into consideration. Akfen Construction adopts all phases of sustainable services as a way of doing business.

- Within the scope of the Business Continuity Management System, the risks that might occur in all business activities are determined, risk analyses are conducted and necessary arrangements and measures are taken.
- The necessary infrastructure is prepared to ensure continuity with minimum or no impact in all out-of-control situations in the business activities.
- Crisis and emergency management is coordinated centrally.
- Planning, training, tests and drills are conducted to ensure business continuity. The obtained data is reported.
- The health and safety of employees is top priority and in case of a possible incident, business activities will not be initiated before the conditions of the working environment are improved in a healthy and safe way.
- Determining the share of innovative studies in our production processes within total revenues and monitoring the continuity of the studies constitute the basis of our innovation studies.
