Water Conservation Policy

Water is one of the most important resources that ensures the continuity of our planet and all life on it. Akfen Construction is aware of the fragility of water, which is crucial for all activities of life, against the needs of the entire ecosystem. It believes in the necessity of giving priority to and the importance of the efficient use of water directly or indirectly in the conservation of environmental and natural resources.

Within the scope of its management and powers in projects; Akfen Construction is committed to:

- Reducing water footprint and ensuring water efficiency
- Making action plans by conducting qualitative and quantitative studies regarding water efficiency in the supply chain
- Establishing a system for monitoring and reporting water pollution in the entire supply chain
- Taking necessary precautions and measures by assessing the possible effects and possible risks of direct or indirect activities.

Also, Akfen Construction performs necessary studies to increase the awareness of its employees regarding the protection of water resources and consumer awareness.

It conducts studies to control and improve fresh water consumption.

It enhances its targets for managing and improving the impact on fresh water resources.

Akfen Construction does not view water consumption as a priority, but it shares transparent information with its stakeholders about water use and water efficiency.
