Basic Environmental Policy

Respect for the environment is among our corporate values. We plan all our processes by assessing the impact of the relevant activity on the environment, and take the necessary measures.

The environmental priorities of Akfen Construction include:

- Ensuring that respect for the environment is adopted along the entire value chain and informing suppliers by making the necessary arrangements
- Implementing an environmental assessment system that allows for the reduction of environmental risks, management of resources and ensuring their efficiency and reducing investment costs
- Determining the strategic priorities and aspects related to the environment and updating them periodically
- Training employees and suppliers
- Determining verifiable and realistic environmental targets
- Compliance with national and international environmental standards and participation in initiatives
- Compliance with environmental laws and regulations applicable in the countries where the operations are conducted
- Maintaining a responsible balance of production and consumption
- Fulfilling the energy needs that will contribute to a sustainable and responsible environment, creating a value with new technologies and innovative and eco-efficient practices
- Determining the environmental risks in project development processes, continuously and regularly monitoring, measuring and reporting such risks
- Reducing risks and minimizing and eliminating negative environmental impacts
- Making arrangements and taking measures for the preservation of water, air, soil and biodiversity, efficient and cost-effective use of energy, reducing emissions, waste and waste management, resource efficiency, chemical waste management
- Supporting the environmental policy with associated policies related to water, air, soil, biodiversity, energy efficiency, emissions, wastes and residues, resource efficiency and chemical wastes
- Supporting public works related to the environment in the areas where Akfen Construction operates.
