Biodiversity Protection Policy

In line with the awareness that biodiversity is the "basis of life"; biodiversity is positioned as a priority while struggling with the challenges of sustainable development. In addition to the environmental policy and the associated policies; biodiversity matters are also taken into consideration at Akfen Construction.

Akfen Construction supports and implements the following matters as part of its management approach and powers:

- Reducing the impact of projects on biodiversity, improving and developing it from production to materials cycle
- Obtaining information from academics and local people about the condition of biodiversity in the region, where the project will be implemented before the commencement of projects, and organizing the activities according to such information
- Conducting risk analysis, regular monitoring and reporting regarding the ecosystems and biodiversity
- Avoiding the resources that might result in the destruction of biodiversity or working in harmony with the supply chain
- Developing the projects in a way that will have minimum impact on biodiversity and ecosystems
- Promoting the use of products that protect or that are produced by taking biodiversity into consideration, cooperating with the suppliers operating based on this awareness
- Conducting activities to increase the awareness of employees, suppliers and the society in project areas in connection with the protection of biodiversity and ecosystems.
